SUMMARY

Backend Developer focused on building APIs, real-time features, and backend systems with **Go**. Comfortable working in Linux-based development environments.

EDUCATION

University of Information Technology (UIT)

Bachelor of Software Engineering

Aug 2023 – June 2026

GPA: 3.5/4.0

Certifications

- TOEIC Listening & Reading: **880/990** (2024)
- TOEIC Speaking & Writing: **300/400** (2026)

TECHNICAL SKILLS

Languages: Go, C#

Frameworks & Libraries: Gin, ASP.NET Core, Entity Framework, SignalR

Databases: PostgreSQL, MongoDB, Redis

Developer Tools: Git, GitHub, Arch Linux, Postman, Docker, VS Code, Visual Studio, GoLand

AI & Productivity: Claude Code, Codex, GitHub Copilot, Antigravity

PROJECTS

LKForum | *Go, Gin, MongoDB, Redis, WebSocket, JWT, Gemini AI*

Backend Developer – 2025

- A Reddit-like forum backend with posts, votes, nested comments, media upload, and real-time updates.
- Implemented REST APIs in Go/Gin using layered architecture and JWT authentication.
- Designed upvote/downvote and nested comment logic with MongoDB, using Redis to cache frequently accessed data.
- Added an internal event bus for notifications, reputation updates, and moderation workflows.
- Added WebSocket events for real-time updates on posts, comments, and votes.
- Integrated Cloudinary for media upload and Google Gemini for basic content moderation.
- **GitHub Repo:** github.com/giakiet05/LKForum

Memesploding | *C#, .NET Core, SignalR, Redis, PostgreSQL, EF Core*

Backend Developer – 2026

- A real-time multiplayer card game backend inspired by *Exploding Kittens*.
- Split the backend into API services and a game server for real-time match logic.
- Implemented an event-driven flow with an internal event bus for cross-hub events.
- Stored match events and snapshots to track current game state.
- Used SignalR to sync player actions, card effects, and lobby state in real time.
- Stored player and match data with PostgreSQL, EF Core, and Redis.
- **GitHub Repo:** github.com/giakiet05/memesploding

Pun Programming Language | *Go*

Personal Project – 2025

- A small programming language with a hand-written compiler and a stack-based virtual machine.
- Built a lexer and recursive descent parser in Go to convert source code into an AST.
- Implemented bytecode generation with custom opcodes.
- Built a stack-based virtual machine to execute bytecode instructions.
- Added a REPL for interactive expression evaluation and testing.
